Definitions for Drossbach Ratings

"A" Excellent Resistant. Possible slight absorption / changes to

weight, dimensions, properties. According to current knowledge, no irreversible damage. Negligible effect

on mechanical properties.

"B" Good Minor Effect. Slight change in properties. Small

reduction in mechanical properties likely

"C" Fair Moderate Effect. Limited resistance. Softening, loss of

> strength. Prolonged exposure may cause irreversible damage (e.g. reduction in mechanical properties /

degradation). Material will have limited life.

"D" Poor

Severe Effect. Irreversible damage. Material may

decompose or dissolve.

"N/D" Rating

The "ND" rating means "No Performance Data

Available"

Drossbach Disclaimer

The Ratings assigned by Drossbach are based on information provided by our raw material manufacturers. These values are based solely on laboratory tests with their raw materials. Components produced from these raw materials are frequently subject to influences that cannot be recognized in laboratory tests (temperature, pressure, material stress etc.). For this reason the ratings given are only to be regarded as being basic guidelines. In critical cases, it is essential that the end user test the actual chemical resistance of our product to see if it will work in their application. This is reference data only, no legal claims can be derived from this information; nor do we accept any liability for it.
